Associative Entity: Converting Relationship and Attribute to Entity

- In relational database, an ERD is eventually converted to a series of tables at the logical modeling phase
- Some relationships and attributes in ERD cannot be represented with the tables, thus need to go through *modification* first
 - Converting them into **Associative Entities**

Associative Entity: Converting Relationship and Attribute to Entity

Associative Entity

| STUDENT |
|-----------|
| StudentID |
| ... |

| REGISTER |
|-----------|
| StudentID |
| CourseID |

| COURSE |
|----------|
| CourseID |
| ... |

Where *date_completed* should go?

- ***date_completed* attribute**: date on which an employee has completed a course

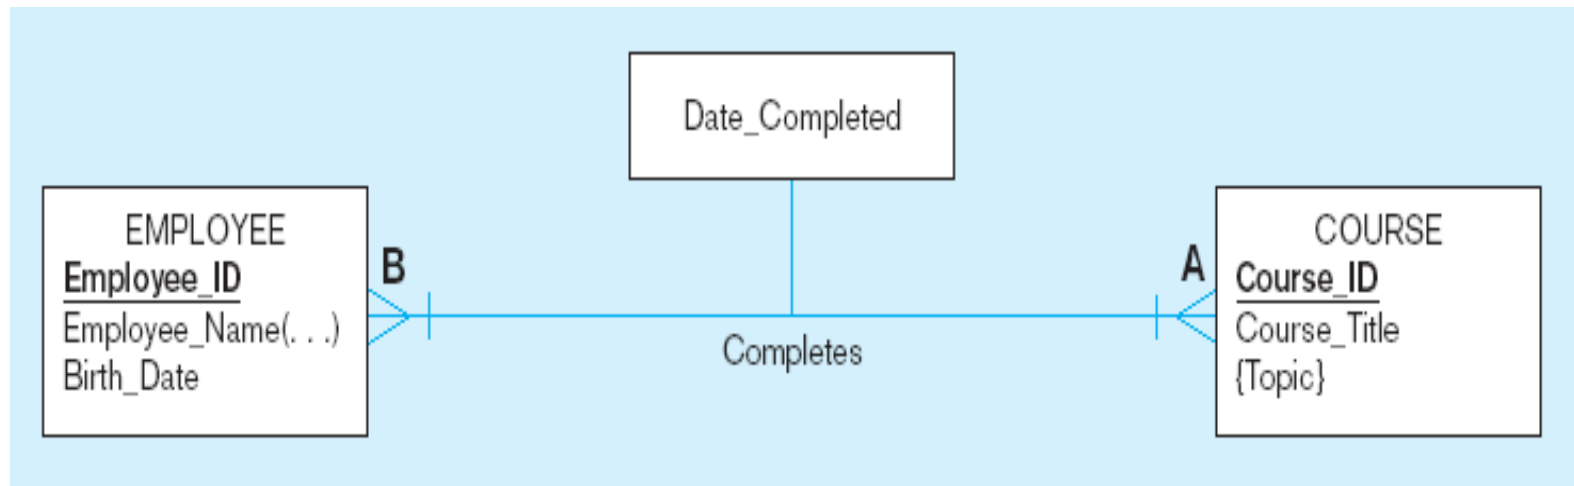

date_completed is an attribute on the relationship “Completes”

Attribute on Relationship

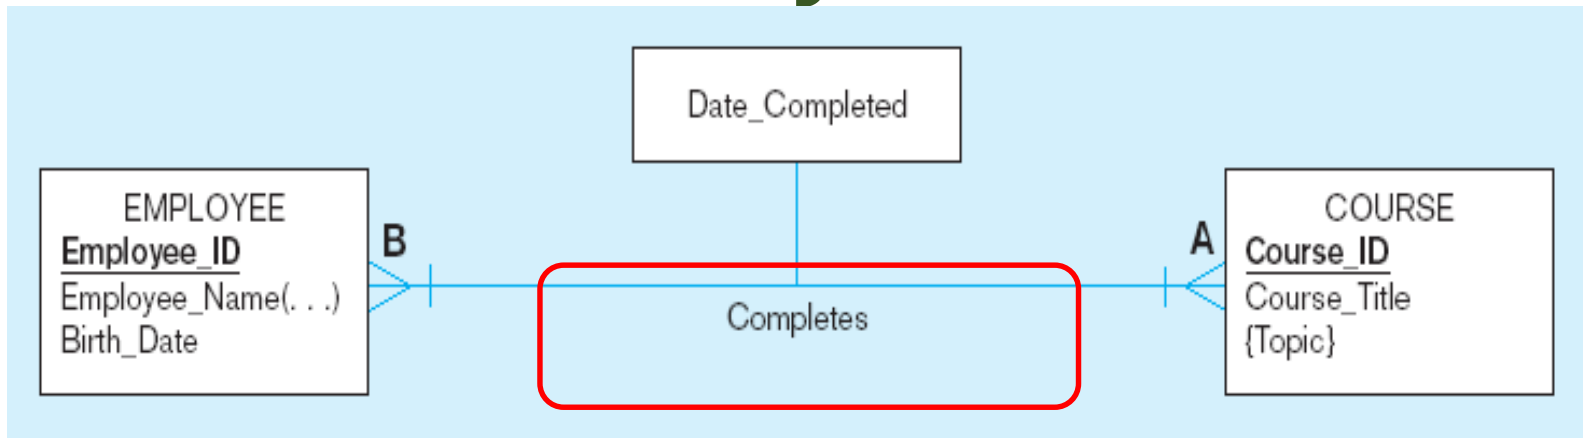

- These describe features pertaining to the association between the entities in the relationship

Converting High-order (Ternary) Relationship to Associative Entity

When do we need the conversion to entity?

- Any “Many-to-many” relationships
- The associative entity
 - could have independent meaning to end users
 - has a unique identifier and/or other attributes
 - may participate in other relationships

Wrap-up

- Converting attribute on relationship to entity
- Converting multi-valued attribute to entity
- Converting high-order relationship into entity
